

To whom it may concern: Hello, I am a driver for Contract Freighters Incorporated (CFI) and I am extremely upset about this bill (HR4026). Taking away the stations that tell us what the weather is like and how the traffic conditions are is the wrong decision. Of course it's all a game about money, but let me tell you, there have been numerous times these stations have saved me from being late at a pick-up / drop-off. Not only do these stations help with us drivers making it to our destination on time, it also helps alleviate congestion at the place of an accident. True, not everyone has XM, and not everyone that has XM will be listening to the traffic report at that time, but the miracle of CB communications does wonders. If one driver hears the traffic report, then he / she will typically forward the message to the surrounding drivers in the area, and so on and so forth. The point being, that we drivers who depend on making the delivery on time, depend on this information...this is our livelihood. So please don't make a hasty decision on what is obviously yet another way for someone to keep a dollar away from the other guy.
